

FLEUR DE SEL DE CAMARGUE

The crystals of the Fleur de sel de Camargue appear in summer on the surface of the salt marshes and are harvested by hand. After draining during several hours under the sun, the Fleur de Sel de Camargue is sieved before being packed. The crunchy and irregular grains of the Fleur de Sel de Camargue daintily play on the food taste.

PHYSICAL AND CHEMICAL CHARACTERISTICS

		Unit	Values	Methods of reference	
				AFNOR Standards	ISO standards
Guaranteed values	Na Cl (on dry basis)	%	> 98	NFT 20-057	ISO 6227
	Loss of mass (at 110° C)	%	≤ 4	NFT 20-401	ISO 2483
	Solubility in water (at 20° C)	g/l	358	Salins own method	
Typical values	Granularity		Crystals contained essentially between 0.4 and 5 mm	NFX 11-507	ISO 2591
	Calcium (on dry basis)	ppm	2000	NFT 20-406	ISO 2482
	Magnesium (on dry basis)	ppm	1000	NFT 20-406	ISO 2482
	Sulphates (on dry basis)	ppm	1000	NFT 20-405	ISO 2480
	Insolubles (on dry basis)	%	0.07		ISO 2479
	Visible density (non compressed salt)		0.8	Salins own method	

TREATMENT

None

USE-BY DATE

Product not subject to consumption limit date by virtue of the article B.01.007 of the Canadian Food and Drugs Act.

REGULATION TEXTS AND REFERENCE STANDARDS

- The Codex Alimentarius STAN 150-1985 standard for food grade salt.
- The Canadian Food and Drugs Act and Regulation and specially the article B.17 relative to salt.

USAGE

Seasoning salt crystals

STORAGE OF CONSERVATION

In a clean, dry and cool place

PRODUCTION SITE

Salt work at Aigues-Mortes (F - 30220)

In a constant concern of our customers satisfaction and of reliability and improvement of its products quality, Salins France is ISO 9001 version 2008 certified.

The food products have to meet sanitary regulations, therefore the site of Aigues-Mortes is engaged in the process of risks analysis HACCP (Hazard Analysis Critical Control Point). It is IFS v.5 certified.
